# RADIO BUTTONS
PROBLEM:

1.   The application below serves to illustrate how to display two or more groups of radio buttons. You have to group them within a frame. Otherwise C# lumps all the groups together.

To create a group of radio buttons in a frame , follow these steps.

a)   Draw the frame first
b)   Next click once on the radio button from the toolbar
c)   Finally move the mouse inside the frame and draw the radio button

This application should work like hellod. The appropriate images should be displayed when the corresponding radio buttons in the two groups are chosen. The other images should not be visible. Save this application as radiogrp.
